## OBJECTIVE

---

**Engineering Lead** with 12 years in software and 6 leading teams of 6-12 engineers. Comfortable owning both the architecture and the delivery: I still review designs and write code, and I run the hiring and growth side of the team. Looking for a lead role at a company where the hard problems are technical rather than political.

## PROJECT HIGHLIGHTS

---

### Splitting the Monolith — Order and Fulfilment

Deploys had become a queue: eleven teams shared one release train, and a bad change from any of them blocked everyone. Led an **18-month** split of the order and fulfilment domains into **22 services** across **9 bounded contexts**, peeling out one context at a time and dual-writing during each cut-over so nothing went dark. Release cadence went from **fortnightly to on-demand**, and teams stopped coordinating deploys with each other.

### Rebuilding the Interview Loop

Offer-accept rate was **48%** and two hires in a row left within a year. Rewrote the loop around a work-sample exercise reviewed blind, replaced the whiteboard round, and wrote a scoring rubric interviewers actually filled in. Time-to-offer dropped from **five weeks to twelve days**, and offer-accept reached **81%** over the following 18 months.

### Cutting the On-Call Burden

The team was paged **60-70 times a month** and two engineers were close to leaving over it. Spent a quarter treating alert noise as a project rather than a chore: deleted alerts nobody acted on, replaced threshold alerts on symptoms with alerts on customer impact, and required every remaining alert to name a runbook. Pages fell to **under 15 a month** with no increase in missed incidents, measured against customer-reported outages.

## WORK EXPERIENCE

---

### Fjord Retail Group

**Engineering Lead** | Jan 2020 - Present

- Lead **2 squads (11 engineers)** across order management and fulfilment.
- Own architecture review for the domain; set the service boundaries and the deprecation path for the monolith.
- Run hiring for the group: **9 engineers hired**, and rewrote the interview loop.
- Still hands-on: **Java (Spring Boot), TypeScript**, code review daily.
- Report delivery risk to the CTO and negotiate scope with product leadership.
- Introduced written design docs for anything touching more than one service, and a two-week RFC window before large changes.
- Run the incident review process: blameless postmortems with owned follow-up actions tracked to completion.

### Aurora Systems

**Senior Engineer, then Tech Lead** | Sep 2015 - Dec 2019

- Grew from IC to leading a team of **6** on a B2B analytics product.
- Designed the ingestion pipeline handling **8M events/day** on **Kafka** and **ClickHouse**.
- Introduced trunk-based development and a CI gate, moving the team from monthly to weekly releases.
- Mentored three engineers into senior roles.

### Vantage Labs

**Software Engineer** | Jun 2012 - Aug 2015

- Built customer-facing features in **Java** and **JavaScript** for an insurance platform.
- Took over the release process and automated it, removing a two-day manual checklist.

## SKILLS

---

### Leadership

- **Team:** Hiring, performance reviews, career development, running 1:1s.
- **Delivery:** Roadmap planning, scope negotiation, dependency management, incident command.
- **Communication:** Translating technical risk for executives; written design docs and RFCs.

### Technical

- **Languages:** Java (Spring Boot), TypeScript, SQL.

- **Architecture:** Domain-Driven Design, event-driven systems, service decomposition.
- **Infrastructure:** Kubernetes, Kafka, PostgreSQL, ClickHouse, GitHub Actions.
- **Practices:** Trunk-based development, design docs and RFCs, blameless postmortems, contract testing.

## SPEAKING & WRITING

---

- **NDC Oslo, 2024** - "Splitting a monolith without stopping the world": what dual-writing costs and when it is worth it.
- **Internal engineering blog** - series on service boundaries, design docs, and running incident reviews people are willing to attend.

## EDUCATION

---

**KTH Royal Institute of Technology**

**MSc Computer Science** | 2010 - 2012

## LANGUAGES

---

- **Swedish:** Native.
- **English:** Fluent.
